Exercise 1.2 - Practice Task 4

>>> str1 = 'hello, '
>>> str2 = 'how are you?'
>>> str3 = str1 + str2

To practice what you've learned, without using Python's shell, work out on your own what the following statements would return:

str3 = 'hello, how are you?'

str3[3:]
• **This will print 'lo, how are you?'**

str3[-3:]
• **This will print 'ou?'**

str3[2:9:3]
• **This will print 'l, o'**

str3[::-2]
• **This will print '?o r o olh'**

str3[2:8]
• **This will print 'llo, h'**
